Summary

Software engineer with 5+ years of professional experience and a strong frontend background. Own delivery from clarifying requirements and shaping architecture through frontend and backend implementation, production deployment, and support. Build reliable, user-friendly web products with a focus on performance and accessibility.

Experience

P2P.org

Cyprus | Remote
Dec 2025 - Present

Frontend Engineer

P2P.org is a blockchain infrastructure company providing Staking-as-a-Business solutions across 40+ networks with $12B+ AUM – delivering white-label staking APIs, DeFi yield products, and validator tooling to exchanges, wallets, and banks.

- Delivered authentication and account management across backend and frontend through production deployment, owning reliability and support.
- Built and launched a white-label staking dApp for an institutional client, supporting a broader commercial deal. Owned implementation, wallet integrations, infrastructure, cross-team coordination, and client communication.
- Shaped the MVP scope and architecture of an institutional platform, clarifying requirements with business stakeholders, documenting agreed decisions, and turning initiatives into actionable engineering tasks.

Social Discovery Group

Cyprus | Remote
Aug 2025 - Dec 2025

Frontend Developer

Social Discovery Group is a global tech company building social discovery and virtual intimacy products for over 500M users across 150+ countries.

- Owned implementation of 9 A/B tests within the Payments team, delivering robust features on time and improving conversion rates and user trust.
- Suggested multiple development workflow and UX improvements, streamlining processes and enhancing overall product usability.

TrueLab Game Studios

Malta | Remote
Dec 2020 - Aug 2025

Frontend Developer

TrueLab Game Studios is an iGaming studio creating online games for global operators.

- Prototyped, designed, and built a unified React.js / Redux Toolkit / Tailwind CSS UI and business logic application for games, reducing development costs by over 35%, streamlining support, and doubling the feature-release speed.
- Led 11 projects through planning, full-stack development and support stages. Owned technical implementation, sticking to deadlines and cross-functional team coordination; shipped every project on time.
- Created an internal localization tool that cut translation effort and enabled launches in 15+ new language markets.
- Mentored 7 engineers – guiding 5 juniors to mid-level and 2 mids to senior-ready.
- Shipped a Docusaurus documentation website, cutting duplicate chat questions by 75% and freeing 15+ developer hours per week.
- Introduced and implemented unit and integration tests for the most critical parts and user stories across the company’s key projects, reducing the new-bug count by around 70% in these modules.

- Authored documentation and style guides that shortened onboarding by 20% and reduced repetitive bugs across modules.
- Implemented modern graphics formats and other optimizations, reducing average load time by about 40% and significantly boosting user experience.

LocoTech Service

Russia | On Site
Mar 2019 - Nov 2020

Service Engineer

LocoTech Service is a large railway engineering company providing maintenance, repair, and modernization services for locomotives.

Collected and analyzed key revenue-related depot indicators, coordinated data validation with Russian Railways, and led a 5-month ACS integration, automating a large part of Service Engineer tasks and cutting daily operational time from 6 to 2 hours.

Education

Bachelor's degree (2019*) | International Academy of Business and New Technologies (Yaroslavl) | Applied Computer Science in Economics, *(*Incomplete higher education)*

Skills & Languages

Frontend: TypeScript / JavaScript • React • Redux Toolkit • React Router • Vite / Webpack • Tailwind CSS • SCSS / SASS • Socket.IO • Astro • Next.js
Backend: Node.js • REST APIs • JWT authentication • Google OAuth • RabbitMQ
Infrastructure and operations: Nx • Docker • Kubernetes • GitHub Actions • HashiCorp Vault • Sentry
Testing: Jest • Node.js test runner • Storybook (visual/interaction tests) • Playwright (E2E) • React Testing Library
Code Quality: ESLint • Prettier • Stylelint • Husky + lint-staged
Performance and accessibility: WCAG • Web Vitals • ARIA roles • semantic HTML
Engineering delivery: Requirements analysis • Technical planning • Architecture decision records • Cross-team coordination • Stakeholder communication
Language Skills: English – Upper-Intermediate (B2) • Russian – Native
